

Please reject the NAB's petition 04-160 and any other legislation that would put limits on satellite radio. I have used satellite radio for one yr now. I mainly listen to it when I am in my garage working on the weekends. The reception is perfect. I get static on my FM stations due to the garage structure and power lines near by. I am not listening to the radio to be sold products and listen to ads like I am forced to listen to on FM or AM radio. I am happy to pay a fee to just hear the music I want especially when in my area there are no stations that carry the type of music I can get from satellite. My favorite is The Loft that plays James Taylor type music. I just don't have the option for the type of music I enjoy on the stations in my area. Thank you.
